

Mardi Lights is the term UP uses for all lights that are made with “re-fused” Mardi Gras beads – beads that have gone through a melting/fusing process to recycle them into plastic pliable sheets to form into lighting, having the appearance of glass but really a robust recycled plastic.

No light is ever the same twice and a huge range of colors and styles are available, all sizes shown are approx and all have UL issue electrical components, bulb wattage ranges from 4 – 75 watts depending on style and shape of light and wherever possible we use CFL bulbs...

So check out all the amazing styles and get some Mardi Gras glow into your environment.
